

SECTION – A

There are **FOUR** questions in this section. Answer any **THREE**.

1. (a) What are some of the materials used in making casting patterns? What features should be considered when selecting a pattern material? Explain briefly. **(10)**
- (b) Show by means of neat sketch the section of a typical finished mold, prior to casting. Name the various elements and gating system and explain their functions. **(10)**
- (c) With the help of suitable diagrams describe the following: **(15)**
 - (i) Split pattern and Sweep pattern
 - (ii) Centrifugal casting

2. (a) List the advantages and limitations of metal as the pattern material. Discuss the dry sand mold and skin dry mold used in the casting process. **(10)**
- (b) With the help of sketches describe the different types of casting defect in sand casting. How might defective castings be repaired to permit successful use in their intended application? **(10)**
- (c) Describe briefly the investment casting with necessary sketch. What are the advantages and limitations of investment casting in comparison with sand mold casting? **(15)**

3. (a) Sketch the various types of weld joints and weld used in making a joint. Differentiate among autogenous welding, homogeneous welding and heterogeneous welding. **(10)**
- (b) Explain the similarities and differences of consumable and non-consumable electrodes. Why is shielded metal arc welding a commonly used process? Why it is also called stick welding? **(10)**
- (c) With the help of neat sketches, describe briefly the principles of operation of Submersed arc welding. For what types of applications might Submersed arc welding be attractive? **(15)**

4. (a) Explain the similarities and differences between Electron-beam welding and Laser-beam welding. Give some typical applications for each. **(10)**
- (b) Enumerate common defects encountered with welding products and suggest methods to counter these defects. Identify the factors that affect weldability. **(10)**
- (c) What are the desirable properties of a metal that would provide good weldability for resistance welding? With the help of suitable diagram describe Percussion welding. **(15)**

IPE 205

SECTION - B

There are **FOUR** questions in this section. Answer any **THREE**.

5. (a) Explain different forging operations based on the nature of work material flow which is constrained by dies. (15)
- (b) Describe any 5 types of forming processes in sheet metal working with necessary sketches. (20)
6. (a) Distinguish different forging presses regarding their mechanism. (12)
- (b) What do you mean by extrusion? Describe various extrusion processes with appropriate sketches. (15)
- (c) With the help of diagram, discuss the following operations: (8)
- (i) Upsetting
- (ii) Metal hobbing
7. (a) Using schematic diagram briefly describe different types of dies used for shearing of sheet metal. (12)
- (b) Discuss the manufacturing process of an glass bottle with appropriate sketches. (15)
- (c) Describe the general properties of ceramics and glasses. (8)
8. (a) What are the steps involved in making powder metallurgy parts? Describe briefly. (12)
- (b) Discuss the design considerations for powder metallurgy? Give examples for poor and good design of powder metallurgy parts. (15)
- (c) How the density can influences the mechanical and physical properties of powder metallurgy parts. (8)

The figures in the margin indicate full marks.

USE SEPARATE SCRIPTS FOR EACH SECTION

SECTION - AThere are **FOUR** questions in this section. Answer any **THREE**.

1. (a) Before the 400-kN load is applied, the rigid platform rests on two steel bars, each of cross-sectional area 1400 mm^2 , as shown in the Fig. for Q. No. 1(a). The cross-sectional area of the aluminium bar is 2800 mm^2 . Compute the stress in the aluminium bar after the 400-kN load is applied. Use $E = 200 \text{ GPa}$ for steel and $E = 70 \text{ GPa}$ for aluminum. Neglect the weight of the platform. (15)
- (b) (i) For the axial loading shown in the Fig. for Q. 1(b), determine the change in height and the change in volume of the brass cylinder.
(ii) Solve the problem in part (i), assuming that the loading is hydrostatic with $\sigma_x = \sigma_y = \sigma_z = -70 \text{ MPa}$. (20)
2. (a) Four pulleys are attached to the 50-mm-diameter aluminium shaft. If torques are applied to the pulleys as shown in Fig. for Q. No. 2(a), determine the angle of rotation of pulley D relative to pulley A. Use $G = 28 \text{ GPa}$ for aluminium. (17)
- (b) A flanged bolt coupling consists of six $\frac{1}{2}$ in. steel bolts evenly spaced around a bolt circle 12 in. in diameter, and four $\frac{3}{4}$ in. aluminium bolts on a concentric bolt circle 8 in. in diameter. What torque can be applied without exceeding 9000 psi in the steel or 6000 psi in the aluminium? Assume $G_{st} = 12 \times 10^6 \text{ psi}$ and $G_{al} = 4 \times 10^6 \text{ psi}$. (18)
3. (a) An aluminium column of length L and rectangular cross-section has a fixed end at B and supports an axial load at A as shown in Fig. for Q. No. 3(a). Two smooth and rounded fixed plates restrain end A from moving in one of the vertical planes of symmetry but allow it to move in the other plane. (18)
- (i) Determine the ratio a/b of the two sides of the cross-section corresponding to the most efficient design against buckling and
(ii) Design the most efficient cross-section for the column, knowing that, $L = 20 \text{ in.}$, $E = 10.1 \times 10^6 \text{ psi}$, $P = 5 \text{ kips}$ and factor of safety $FS = 2.5$ are required.
- (b) A pinned-end column of length $L = 2.1 \text{ m}$ is constructed of steel pipe ($E = 210 \text{ GPa}$) having inside diameter $d_1 = 60 \text{ mm}$ and outside diameter $d_2 = 68 \text{ mm}$ as shown in Fig. for Q. No. 3(b). A compressive load $P = 10 \text{ kN}$ acts with eccentricity $e = 30 \text{ mm}$. (17)
- (i) What is the maximum compressive stress in the column?
(ii) If the allowable stress in the steel is 50 MPa , what is the maximum permissible length L_{\max} of the column?

ME 243(IPE)

4. An element in plane stress is subjected to stresses as shown in Fig. for Q. No. 4. Using Mohr's Circle, determine (35)
- (i) the stresses acting on an element oriented at an angle $\theta = 60^\circ$ from the x -axis.
 - (ii) the principal stresses and
 - (iii) the maximum shear stresses and associated normal stresses.
- Show all results on sketches of properly oriented elements.

SECTION – B

There are **FOUR** questions in this Section. Answer any **THREE**.

5. (a) Draw the shear force and bending moment diagrams for the loaded beam as shown in Figure 5(a). Specify values at all changes of loading positions. Also specify the value of maximum bending moment and the location where it occurs. (17)
- (b) A box overhanging beam carries a uniformly distributed load of 5 kN/m and a concentrated load of 10 kN, as shown in Figure 5(b). If the allowable stress in either tension or compression is 120 MPa, determine the thickness "t". (18)
6. (a) A cantilever beam of length L carries a uniformly distributed load of "w" over its entire length and a concentrated load of P at its free end, as shown in Figure 6(a). Using double integration method, find the equation of the elastic curve of the beam and an expression of maximum deflection. (17)
- (b) A cantilever beam of length 4 m is subjected to a triangular distribution of load with maximum value of 20 kN and an end moment $M_0 = 5$ kNm, as shown in Figure 6(b). Using area moment method, determine the deflection at the free end. Consider flexural rigidity $EI = 50 \times 10^6$ Nm². (18)
7. (a) A timber beam is reinforced at the bottom only by a steel plate, as shown in Figure 7(a). Determine the moment that can be resisted by the beam if the allowable stress in timber is 8 MPa and that in steel is 130 MPa. Consider $n = 15$. (17)
- (b) A crane hook of trapezoidal cross-section supports a load P, as shown in Figure 7(b). If the allowable stress of the hook material either in tension or compression is 140 MPa, determine the maximum load P that can be supported, Solve the problem using curve-beam theory. (18)
8. (a) Derive the expression for tangential and longitudinal stresses of a thin-walled closed ends cylindrical pressure vessel subjected to internal pressure and hence show that the magnitude of tangential stress is twice the value of longitudinal stress. (17)
- (b) For a thick-walled cylindrical pressure vessel subjected to an internal pressure of 10 MPa, determine the wall thickness, if the internal diameter of the cylinder is 500 mm and the tangential stress is not to exceed 110 MPa. What maximum internal pressure may be applied, if this cylinder for the same limiting tangential stress is to be a thin-walled cylinder? (18)

Tables related to Interest, Annuity, Depreciable Property Classification and GDS recovery rate are provided

SECTION – A

There are **FOUR** questions in this section. Answer any **THREE** questions.

Draw cash flow diagrams if applicable.

1. (a) What do you understand by *Minimum Attractive Rate of Return (MARR)*? How does top management of an organization set value of *MARR*? Briefly explain. (3 1/3)
- (b) A project your firm is considering for implementation has these estimated costs and revenues: an investment cost of \$50,000; maintenance costs that start at \$5,000 at the end of year (EOY) 1 and increase by \$1,000 for each of the next 4 years, and then remain constant for the following 5 years; savings of \$20,000 per year (EOY 1–10); and finally a resale value of \$35,00 at the EOY 10. If the project has a 10-year life and the firm's MARR is 10% per year, what is the present worth of the project? Is it a sound investment opportunity? (10)
- (c) Stan Moneymaker has the opportunity to purchase a certain U.S. Treasury bond that matures in eight years and has a face value of \$10,000. This means that Stan will receive \$10,000 cash when the bond's maturity date is reached. The bond stipulates a fixed nominal interest rate of 8% per year, but interest payments are made to the bondholder every three months; therefore, each payment amounts to 2% of the face value. Stan would like to earn 10% nominal interest (compounded quarterly) per year on his investment, because interest rates in the economy have risen since the bond was issued. How much should Stan be willing to pay for the bond? (10)
2. (a) What is Capitalized Worth (CW)? Discuss in short. (3 1/3)
- (b) A new bridge across the Cumberland River is being planned near a busy high-way intersection in the commercial part of a mid-western town. The construction (first) cost of the bridge is \$1,900,000 and annual upkeep is estimated to be \$25,000. In addition to annual upkeep, major maintenance work is anticipated every eight years at a cost of \$350,000 per occurrence. The town government's MARR is 8% per year. (i) For this problem, what analysis period (N) is, practically speaking, defined as forever? (ii) If the bridge has an expected life of 50 years, what is the capitalized worth (iii) (CW) of the bridge over a 100-year study period? (10)

IPE 209

Contd... Q. No. 2

(c) The world's largest carpet maker has just completed a feasibility study of what to do with the 16,000 tons of overruns, rejects, and remnants it produces every year. The company's CEO launched the feasibility study by asking, why pay someone to dig coal out of the ground and then pay someone to put our waste into a landfill? Why not just burn our own waste? The company is proposing to build a \$10 million power plant to burn its waste as fuel, thereby saving \$2.8 million a year in coal purchases. Company engineers have determined that the waste burning plant will be environmentally sound, and after its four-year study period the plant can be sold to a local electricity utility for \$5 million. (i) What is the IRR of the proposed power plant? (ii) If the firm's MARR is 15% per year, should this project be undertaken?

(10)

3. (a) Four mutually exclusive alternatives are being evaluated, and their costs and revenues are itemized below. If the MARR is 15% per year and the analysis period is 12 years, use the PW method to determine which alternatives are economically acceptable and which one should be selected. If the total capital investment budget available is \$200,000, which alternative should be selected? Which rule applies? Why?

(11 1/3)

	Mutually Exclusive Alternative			
	I	II	III	IV
Capital investment	\$100,000	\$152,000	\$184,000	\$220,000
Annual revenues less expenses	15,200	31,900	35,900	41,500
Market value (end of useful life)	10,000	0	15,000	20,000
Useful life (years)	12	12	12	12

(b) You have been requested to offer a recommendation of one of the mutually exclusive industrial sanitation control systems shown in the table below. If the MARR is 15% per year, which system would you select? Use the IRR method.

(6)

	Gravity-fed	Vacuum-led
Capital investment	\$24,500	\$37,900
Annual receipts less expenses	8,000	8,000
Life (in years)	5	10
IRR	18.9%	16.5%

(c) A firm purchased and placed in service a new piece of semiconductor manufacturing equipment. The cost basis for the equipment is \$100,000. Determine (i) the depreciation charge permissible in the fourth year, (ii) the BV at the end of the fourth year, (iii) the cumulative depreciation through the third year, (iv) the BV at the end of the fifth year if the equipment is disposed of at that time.

(6)

IPE 209

4. (a) Acme purchased a pump for Tk. 25,000,000 and expended Tk. 2,000,000 for shipping and installation. The addition of this pump will result in an increase in revenue of Tk. 8,000,000 with associated increased expenses of Tk. 1,000,000 each year. The pump has a GDS recovery period of five years, and Acme's effective tax rate is 40%. Calculate BTCFs and ATCFs for this project for different years of service of the asset. (10)

(b) List some difficulties associated with evaluating public sector projects. The city of Columbia is considering extending the runways of its municipal airport so that commercial jets can use the facility. The land necessary for the runway extension is currently a farmland that can be purchased for \$350,000. Construction costs for the runway extension are projected to be \$600,000, and the additional annual maintenance costs for the extension are estimated to be \$22,500. If the runways are extended, a small terminal will be constructed at a cost of \$250,000. The annual operating and maintenance costs for the terminal are estimated at \$75,000. Finally, the projected increase in flight will require the addition of two air traffic controllers at an annual cost of \$100,000. Annual benefits of the runway extension have been estimated as follows: (11)

- \$325,000 Rental receipts from airlines leasing space at the facility
- \$65,000 Airport tax charged to passengers
- \$50,000 Convenience benefit for residents of Columbia
- \$50,000 Additional tourism dollars for Columbia

Apply the B-C ratio method with a study period of 20 years and a MARR of 10% per year to determine whether the runways at Columbia Municipal Airport should be extended.

(c) Briefly explain the importance of sensitivity analysis in case of engineering economy. Explain with an example. (2 1/3)

SECTION – B

There are **FOUR** questions in this section. Answer any **THREE**.

5. (a) While studying for the Engineering Economy final exam, you and two friends find yourselves craving a fresh pizza. You can't spare the time to pick up the pizza and must have it delivered, "Pick-UP-Sticks" offers a 1.25-inch-thick (including toppings), 20-inch square pizza with your choice of two toppings for \$15 plus 5% VAT and a \$1.50 delivery charge (no VAT on delivery charge). "Pizza King" offers the round, deep-dish pizza, which is 20 inches in diameter. It is 1.75 inches thick, includes two toppings, and costs \$17.25 plus 5% VAT and free delivery. (18)

IPE 209

Contd... Q. No. 5(a)

- (i) What is the problem in this situation? Please state it in an explicit and precise manner.
 - (ii) Systematically apply the seven principles of engineering economy to the problem you have defined in part (i).
 - (iii) Assuming that your common unit of measure is dollars (i.e., cost), what is the better value for getting a pizza based on the criterion of minimizing cost per unit of volume?
 - (iv) What other criteria might be used to select which pizza to purchase?
- (b) Differentiate between necessities and luxuries. Explain with examples. **(5 1/3)**
6. (a) Briefly explain the acquisition phase of life cycle cost and its relative cost. **(10)**
- (b) Write down the differences between cash cost and book cost briefly with examples. **(5)**
- (c) A large wood products company is negotiating a contract to sell plywood overseas. The fixed cost that can be allocated to the production of plywood is \$800,000 per month. The variable cost per thousand board feet is \$155.50. The price charged will be determined by $p = \$600 - (0.5)D$ per 1,000 board feet. **(8 1/3)**
- (i) For this situation, determine the optimal monthly sales volume for this product and calculate the profit (or loss) at the optimal volume.
 - (ii) What is the domain of profitable demand during a month?
7. (a) It is estimated that you will pay about \$80,000 into the Social Security system (FICA) over your 40-year work span. For simplicity, assume this is an annuity of \$2,000 per year, starting with your 26th birthday and continuing through your 65th birthday. **(11)**
- (i) What is the future equivalent worth of your Social Security savings when you retire at age 65 if the government's interest rate is 9% per year?
 - (ii) What annual withdrawal can you make if you expect to live 20 years in retirement? Let $i = 9\%$ per year.
- (b) Suppose that a \$200 lump-sum amount is invested for 15 years at a nominal interest rate of 15% compounded quarterly. How much is it worth at the end of the 10th year? **(6 1/3)**
- (c) Describe the differences between **(6)**
- (i) Simple interest and compound interest
 - (ii) Nominal interest and effective interest rate
 - (iii) Consumer goods and producer goods

IPE 209

8. (a) What value of T makes these two cash flow diagrams (see Figure 8(a)) economically equivalent at 9% annual interest? (10)

Figure: 8(a)

- (b) Determine the present equivalent and annual equivalent (uniform) value of the cash flow pattern shown below when $i = 15\%$ per year. (7 1/3)

End of Year	Amount (\$)
0	-1600
1	+700
2	+800
3	+400
4	+200
5	+100
6	+200
7	+300

- (c) Write short notes on (6)

- (i) Direct and indirect cost
- (ii) Incremental cost
- (iii) Opportunity cost

USE SEPARATE SCRIPTS FOR EACH SECTION

SECTION – AThere are **FOUR** questions in this section. Answer any **THREE**.

1. (a) Briefly explain the primary energy supplies in Bangladesh. (15)
 (b) Write about per capita electricity consumption in major SAARC countries. Also mention their corresponding carbon emission scenario. (10)
 (c) Write a note on 'Applications of Heat Transfer' – Also mention about empirical laws of each of the heat transfer modes. (11 2/3)
 (d) Give examples of heat generation in solids. How is it taken care of in one dimensional heat conduction analysis? (10)

2. (a) Consider a long resistance wire of radius 2 mm and thermal conductivity $k = 15 \text{ W/m.K}$ in which heat is generated uniformly as a result of resistance heating at a constant rate of 50 W/cm^3 . The wire is embedded in a 5 mm-thick layer of ceramic ($k = 1.2 \text{ W/m.K}$). If the outer surface of the ceramic layer is measured to be 45°C , determine the temperatures at the center of the wire and the interface of the wire and the ceramic layer under steady state conditions. (22)
 (b) A 3-mm-diameter an 5-m-long electric wire is tightly wrapped with a 2-mm-thick plastic cover whose thermal conductivity is 0.15 W/m.K . Electrical measurements indicate that a current of 10A passes through the wire and there is a voltage drop of 10 V along the wire. If the insulated wire is exposed to a medium at 30°C with a heat transfer coefficient of $15 \text{ W/m}^2.\text{K}$, determine the temperature at the interface of the wire and the plastic cover under steady operation Also determine whether doubling the thickness of the plastic cover will increase or decrease this interface temperature. (16)
 (c) Write what you know about convection heat transfer coefficient. (8 2/3)

3. (a) With physical significance, briefly explain three important non-dimensional parameters used in forced convection. Also write a general expression for their relationship. (11 2/3)
 (b) Water is to be heated from 15°C to 65°C as it flows through a 3 cm-internal diameter 5-m long tube. The tube is equipped with an electric resistance heater that provides uniform heating throughout the surface of the tube. The outer surface of the heater is well insulated, so that in steady operation all the heat generated in the heater is transferred to the water in the tube. If the system is to provide hot water at a rate of 10 L/min, determine the power rating of the resistance heater. Also, estimate the inner surface-temperature of the pipe at the exit. (15)

ME 265

Contd ... Q. No. 3(b)

Properties of water at 40°C:

$$\rho = 992.1 \text{ kg/m}^3; c_p = 4179 \text{ J/kg}^\circ\text{C}; p_r = 4.32 \text{ k} = 0.631 \text{ W/m}^\circ\text{C}; \nu = 0.658 \times 10^{-6} \text{ m}^2/\text{s}.$$

(c) What is natural convection? What are the factors that influence natural convection? (10)

(d) Schematically show the natural convection flows in hot and cold plates oriented horizontally and vertically. (10)

4. (a) A six meter long section of an 8-cm-diameter horizontal water pipe passes through a large room whose temperature is 20°C. If the outer surface temperature of the pipe is 70°C, determine the rate of heat loss from the pipe by natural convection and radiation. Assume the emissivity of the pipe surface to be 0.8. Comment on the results. (20)

Properties of air at 45°C:

$$k = 0.02699 \text{ W/m}^\circ\text{C}; p_r = 0.7241; \nu = 1.749 \times 10^{-5} \text{ m}^2/\text{s}$$

(b) What are the factors on which thermal radiation depend? Write about view factor algebra. (10)

(c) Distinguish between refrigeration and air conditioning. (6 $\frac{2}{3}$)

(d) What is a heat exchanger? Mention its types. Explain fouling in it. (10)

SECTION – B

There are **FOUR** questions in this Section. Answer any **THREE**.

Abbreviations have their standard meaning.

5. (a) Compare the characteristics of reciprocating CI and SI engines. (14)

(b) What do you understand by “Firing Order” of a SI engine? With a schematic diagram explain how the high voltage spark is created and distributed up to the spark plugs. (16 $\frac{2}{3}$)

(c) Why do we need a flywheel in a reciprocating IC engine? Briefly explain. (8)

(d) What do you understand by the following engine specification– $r_v = 10$, $B_{stc} = 230 \text{ g/kW-h}$, SAE 20W50, 16-valve. (8)

6. (a) State the 2nd law of Thermodynamics. Briefly explain how it is applicable for a Diesel engine and a domestic refrigerator. (12)

(b) Briefly explain the advantages of a MPFI system compared to a carburetor in a reciprocating SI engine. (10)

(c) Why do we need as cooling system in an engine? With a schematic diagram identify the components of the water cooling system of a typical car engine. (14 $\frac{2}{3}$)

(d) State the functions that need to be fulfilled by the fuel system of a Diesel engine. (10)

7. (a) Briefly explain the advantages and limitations of using Gas Turbines. Where are they used? (12)

(b) With a schematic diagram briefly explain how a Jet Engine is different from a Gas Turbine. (14)

ME 265

Contd ... Q. No. 7

(c) What do you understand by "Bypass-ratio"? Which type of Jet engine is most commonly used in modern passenger aircrafts? (8 2/3)

(d) What do you understand by an "Isentropic" process? Give an example. Deduce an expression of Non-flow energy equation for an isentropic process. (12)

8. (a) A boiler capacity is specified as "5 Ton", what does it mean? State the essentials features of a good boiler. (13 2/3)

(b) What do you understand by "Super heater" and "Economiser" of a boiler. Briefly explain how they influence boiler performance. (10)

(c) Distinguish between "Impulse" and "Reaction" turbines. (8)

(d) What do you understand by "Compounding"? Briefly explain the different methods of compounding practiced in impulse turbines. (15)

Useful Formula

Solid Geometry	Governing Equation For 1D-SS with heat generation	Thermal Resistance, R
Plane Wall	$\frac{d^2T}{dx^2} + \frac{\dot{e}_{gen}}{k} = 0$	$R = \frac{L}{kA}$
Cylinder (pipe, rod)	$\frac{1}{r} \frac{d}{dr} \left(r \frac{dT}{dr} \right) + \frac{\dot{e}_{gen}}{k} = 0$	$R = \frac{\ln(r_2/r_1)}{2\pi Lk}$
Sphere	$\frac{1}{r^2} \frac{d}{dr} \left(r^2 \frac{dT}{dr} \right) + \frac{\dot{e}_{gen}}{k} = 0$	$R = \frac{r_2 - r_1}{4\pi r_1 r_2 k}$

- Net Radiation exchange between opaque, diffuse-gray surfaces:

$$\dot{Q}_{ij} = \frac{\sigma(T_i^4 - T_j^4)}{\frac{1 - \epsilon_i}{\epsilon_i A_i} + \frac{1}{A_i F_{ij}} + \frac{1 - \epsilon_j}{\epsilon_j A_j}}$$

- For fully developed turbulent flow in a smooth tube:

Dettus-Boelter Equation:

$$Nu = 0.023 Re^{0.8} Pr^n \begin{cases} Re > 10,000 \\ 0.7 \leq Pr \leq 160 \end{cases} \begin{cases} n = 0.4 \text{ heating} \\ n = 0.3 \text{ cooling} \end{cases}$$

SECTION – A

There are **FOUR** questions in this section. Answer any **THREE**.

1. (a) Explain ordinal-level data and interval-level data. (12)
- (b) Explain the advantages of cumulative frequency distribution. (8)
- (c) Suppose that we roll a pair of fair dice, so each of the 36 possible outcomes is equally likely. Let A denote the event that the first dice lands on 3, let B be the event that the sum of the dice is 8, and let C be the event that the sum of the dice is 7. (16)
 - (i) Are A and B independent?
 - (ii) Are A and C independent?
- (d) A blood test is 99 percent effective in detecting a certain disease when the disease is present. However, the test also yields a false-positive result for 2 percent of the healthy patients tested. Suppose 0.5 percent of the population has the disease. Find the conditional probability that a randomly tested individual actually has the disease given that his or her test result is positive. (10 $\frac{2}{3}$)

2. (a) Explain the characteristics of hypergeometric distribution. (10)
- (b) How many three-digit numbers can be formed from the digits 0, 1, 2, 3, 4, 5, and 6, if each digit can be used only once? (14)
 - (i) How many of these are odd numbers?
 - (ii) How many are greater than 330?
- (c) A pair of fair dice is tossed. Find the probability of getting (i) a total of 8 (ii) at most a total of 5. (12)
- (d) Two cards are drawn in succession from a deck without replacement. What is the probability that both cards are greater than 2 and less than 8? (10 $\frac{2}{3}$)

3. (a) Prove that both the mean and variance of the binomial distribution are $\mu = np$, and $\sigma^2 = npq$. (12)
- (b) The probability that an automobile being filled with gasoline will also need an oil change is 0.25, the probability that it needs a new oil filter is 0.40, and the probability that both the oil and filter need changing is 0.14. (16)
 - (i) If the oil had to be changed, what is the probability that a new oil filter is needed?
 - (ii) If a new oil filter is needed, what is the probability that the oil has to be changed?

IPE 207

Contd... Q. No. 5

(b) A random variable X has the geometric distribution $g(x; p) = pq^{x-1}$ for $x = 1, 2, 3, \dots$. Show that the moment-generating function of X is **(16)**

$$M_x(t) = \frac{pe^t}{1 - qe^t}, \quad t < \ln q,$$

and then use $M_x(t)$ to find the mean and variance of the geometric distribution.

(c) The Edison Electric Institute has published figures on the number of kilowatt hours used annually by various home appliances. It is claimed that a vacuum cleaner uses an average of 46 kilowatt hours per year. If a random sample of 12 homes included in a planned study indicates that vacuum cleaners use an average of 42 kilowatt hours per year with a standard deviation of 11.9 kilowatt hours, does this suggest at the 0.05 level of significance that vacuum cleaners use, on average, less than 46 kilowatt hours annually? Assume the population of kilowatt hours to be normal. **(15)**

6. (a) Engineers at a large automobile manufacturing company are trying to decide whether to purchase brand A or brand B tires for the company's new models. To help them arrive at a decision, an experiment is conducted using 12 of each brand. The tires are run until they wear out. The results are as follows: **(15 $\frac{2}{3}$)**

- Brand A : $\bar{x}_1 = 37,900$ kilometers,
 $s_1 = 5100$ kilometers.
- Brand B : $\bar{x}_1 = 39,800$ kilometers,
 $s_2 = 5900$ kilometers.

Test the hypothesis that there is no difference in the average wear of the two brands of tires at the 0.05 level of significance. Assume the populations to be approximately normally distributed with equal variances. Use a P -value.

(b) In a study to estimate the proportion of residents in a certain city and its suburbs who favor the construction of the nuclear power plant, it is found that 63 of 100 urban residents favor the construction while only 59 of 125 suburban residents are in favor. Is there a significant difference between the proportions of urban and suburban residents who favor construction of the nuclear plant at the 0.05 level of significance? Make use of a P -value. **(15)**

(c) What assumption do you make regarding the shape of the population distribution in goodness of fit test? Justify your answer. **(4)**

(d) The bank credit card department of Carolina Bank knows from experience that 5 percent of its card holders have had some high school, 15 percent have completed high school, 25 percent have had some college, and 55 percent have completed college. Of the 500 card holders whose cards have been called in for failure to pay their charges this month, 50 had some high school, 100 had completed high school, 190 had some college, and 160 had completed college. Can we conclude that the distribution of card holders who do not pay their charges is different from all others? Use the 0.01 significance level. **(12)**

IPE 207

Contd... Q. No. 3

(c) Each rear tire on an experimental airplane is supposed to be filled to a pressure of 40 pound per square inch (psi). Let x denote the actual air pressure for the right tire and y denote the actual air pressure for the left tire. Suppose that x and y are random variables with the joint density

(18²/₃)

$$f(x, y) = \begin{cases} k(x^2 + y^2), & 30 \leq x < 50, \\ & 30 \leq y < 50 \\ 0, & \text{elsewhere} \end{cases}$$

- (i) Find k .
- (ii) Find $P(30 \leq x \leq 40 \text{ and } 40 \leq y < 50)$.
- (iii) Find the probability that both tires are under filled.

4. (a) State the 'Chebyshev's theorem'. **(6)**

(b) Explain the central limit theorem. **(8)**

(c) Explain Stratified Random Sampling and Systematic Random Sampling. **(16)**

(d) In November 1990 issue of chemical engineering progress, a study discussed the present purity of oxygen from a certain supplier. Assume that the mean was 99.61 with a standard deviation of 0.08. Assume that the distribution of percent purity was approximately normal.

(16²/₃)

- (i) What percentage of the purity values would you expect to be between 99.5 and 99.7?
- (ii) What purity value would you expect to exceed exactly 5% of the population?

SECTION – B

There are **FOUR** questions in this section. Answer any **THREE**.

Normal distribution, t -distribution, chi-square distribution and F-distribution tables attached.

5. (a) The hospital period, in days, for patients following treatment for a certain type of kidney disorder is a random variable $Y = X + 4$, where X has the density function **(15²/₃)**

$$f(x) = \begin{cases} \frac{32}{(x+4)^3}, & x > 0 \\ 0, & \text{elsewhere} \end{cases}$$

- (i) Find the probability density function of the random variable Y .
- (ii) Using the density function of Y , find the probability that the hospital period for a patient following this treatment will exceed 8 days.

Contd P/3

IPE 207

7. (a) There are important applications in which, due to known scientific constraints, the regression line **must go through the origin** (i.e., the intercept must be zero). In other words, the model should read

$$Y_i = \beta_1 x_i + \epsilon_i, \quad i = 1, 2, \dots, n, \quad (16\frac{2}{3})$$

and only a single parameter requires estimation. The model is often called the **regression through the origin model**.

- (i) Show that the least squares estimator of the slope is

$$b_1 = \left(\sum_{i=1}^n x_i y_i \right) / \left(\sum_{i=1}^n x_i^2 \right)$$

- (ii) Show that

$$\sigma_{B_1}^2 = \sigma^2 / \left(\sum_{i=1}^n x_i^2 \right)$$

- (iii) Show that b_1 in part (i) is an unbiased estimator for β_1 .

- (b) Show, in the case of a least squares fit to the simple linear regression model (12)

$$Y_i = \beta_0 + \beta_1 x_i + \epsilon_i, \quad i = 1, 2, \dots, n,$$

that

$$\sum_{i=1}^n (y_i - \hat{y}_i) = \sum_{i=1}^n e_i = 0$$

- (ii) Consider the situation of part (i) but suppose $n = 2$ (i.e., only two data points are available). Give an argument that the least squares regression line will result in $(y_1 - \hat{y}_1) = (y_2 - \hat{y}_2) = 0$. Also show that for this case $R^2 = 1.0$.

- (iii) Does the condition in part (i) hold for a model with zero intercept? Show why or why not.

- (c) A study was made on the amount of converted sugar in a certain process at various temperatures. The data were coded and recorded as follows: (18)

Temperature, x	Converted Sugar, y
1.0	8.1
1.1	7.8
1.2	8.5
1.3	9.8
1.4	9.5
1.5	8.9
1.6	8.6
1.7	10.2
1.8	9.3
1.9	9.2
2.0	10.5

- (i) Estimate the linear regression line.
 (ii) Estimate the mean amount of converted sugar produced when the coded temperature is 1.75.
 (iii) Evaluate s^2 .
 (iv) Construct a 95% confidence interval for β_0 .
 (v) Construct a 95% confidence interval for β_1 .

IPE 207

8. (a) A study was performed on a type of bearing to find the relationship of amount of wear y to x_1 = oil viscosity and x_2 = load. The following data were obtained.

(30²/₃)

y	x_1	x_2	y	x_1	x_2
193	1.6	851	230	15.5	816
172	22.0	1058	91	43.0	1201
113	33.0	1357	125	40.0	1115

- (i) Estimate the unknown parameters of the multiple linear regression equation

$$\mu_{Y|x_1, x_2} = \beta_0 + \beta_1 x_1 + \beta_2 x_2.$$

- (ii) Estimate σ^2 .
- (iii) Compute predicted values, a 95% confidence interval for mean wear, and a 95% prediction interval for observed wear if $x_1 = 20$ and $x_2 = 1000$.
- (iv) Test the following at the 0.05 level. $H_0 : \beta_1 = 0$ versus $H_1 : \beta_1 \neq 0$; $H_0 : \beta_2 = 0$ versus $H_1 : \beta_2 \neq 0$. Do you have any reason to believe that the model in part (i) should be changed? Why or why not?

(b) The data in the following table represent the number of hours of relief provided by five different brands of headache tablets administered to 25 subjects experiencing fevers of 38°C or more. Perform the analysis of variance and test the hypothesis at the 0.05 level of significance that the mean number of hours of relief provided by the tablets is the same for all five brands. Discuss the results.

B.3 Critical Values of Chi-Square

This table contains the values of χ^2 that correspond to a specific right-tail area and specific number of degrees of freedom.

Example: With 17
df and a .02 area in
the upper tail, $\chi^2 = 30.995$

Degrees of Freedom, <i>df</i>	Right-Tail Area			
	0.10	0.05	0.02	0.01
1	2.706	3.841	5.412	6.635
2	4.605	5.991	7.824	9.210
